Education

Rajiv Gandhi Institute of Petroleum Technology | **CGPA: 9.01** — *Jais, Uttar Pradesh*
Bachelor of Technology in Computer Science and Design Engineering — August 2024 - Present

Indian Institute of Technology, Madras | **CGPA: 8.63** — *Chennai, Tamil Nadu*
Bachelor of Science in Data Science and Application — September 2024 - Present

St. Andrews Scots Senior Secondary School | **85.6%** — *New Delhi, Delhi*
Class XII (CBSE) — 2024

St. Andrews Scots Senior Secondary School | **96.8%** — *New Delhi, Delhi*
Class X (CBSE) — 2022

Projects

EduAI: Multimodal RAG Pipeline | Python, OpenAI Whisper, GPT-5/Llama 3.2, Ollama, Pandas

- Architected an end-to-end **Retrieval-Augmented Generation (RAG)** framework that automates video-to-audio conversion via **FFmpeg** and generates timestamped transcripts using **OpenAI Whisper (large-v2)**.
- Developed a custom **grouping algorithm** to merge short transcript segments into larger, logical blocks, providing the **LLM** with better context for more accurate answers.
- Implemented a **model-agnostic inference engine** supporting both high-performance **cloud APIs** (e.g., **GPT-5**) and private, local execution via **Ollama (Llama 3.2)**, ensuring **flexible deployment** across different hardware environments.
- Engineered a high-performance **vector search engine** using high-dimensional embeddings and Cosine Similarity to rank lecture segments, achieving **sub-second retrieval** from a structured Pandas DataFrame.

Interactive Physics-Based Quadcopter Simulator | Python, PyOpenGL, NumPy, Pygame

- Developed a real-time 3D flight simulator implementing **6-DOF** (Degrees of Freedom) rigid body physics and Newtonian mechanics.
- Implemented manual flight control systems (pitch, roll, yaw) using **NumPy** for vector arithmetic and **Euler angle**-to-matrix rotation transformations.
- Designed a textual Heads-Up Display (HUD) overlaying real-time telemetry data (velocity, g-force, gyro rates) onto the 3D viewport.

California Housing Price Predictor | Python, Scikit-Learn, XGBoost

- Orchestrated an end-to-end regression pipeline using **ColumnTransformer** for automated median imputation and one-hot encoding, utilizing **StratifiedShuffleSplit** to prevent sampling bias.
- Optimized model performance via **GridSearchCV**, comparing Linear Regression, Random Forests, and Decision Trees; diagnosed overfitting and selected **XGBoost** as the superior estimator.
- Achieved a **Test RMSE of 46,485** and an R^2 **Score of 0.84** with the final model, demonstrating significantly improved generalization over baseline predictors.

Tech Stack

Languages: C, C++, Python, SQL.
Libraries & Frameworks: NumPy, Pandas, Matplotlib, Scikit-learn, TensorFlow.
Databases: MySQL.
Core Concepts: Machine Learning, Data Structures & Algorithms (DSA), OOPS, Memory Management, STL, Database Management Systems (DBMS).

Research Interests

Building robust **ML models**, **Large Language Models (LLMs)**, and exploring how **Generative AI** can be used for more than just text generation, such as predictive analytics.

Achievements

Competitive Programming (Codeforces): Solved over 540+ problems and achieved a max rating of 1254.

Positions of Responsibility

Competitive Programming Co-Head: GeeksforGeeks Student Chapter.

Extra Curricular Activities

Winner, Intra-College Auction Football Tournament: Key member of the championship team, demonstrating strategic gameplay and coordination.
